

The Great 202 ‘Hack’

or the story of the freedom of fonts

How to ruin a good presentation

Seen computerphile?

Seen 'The Great 202 Jailbreak' or read about it or something else

Watch as much YouTube than me, scary, get a life

Why do i care?

History is interesting

I up the front now, not you

It's a really interesting story of where we came from and how difficult fonts were, allows us to be great full of how easy things are today

Includes mad and interesting people, who got a new toy that didn't work the way they wanted it to work, so they used the knowledge, they had to make it work, they 'hacked' it (more creativity use of the term)

BTW

No blowing of minds(messy), for my slides[oooh], but interesting maybe[yay]

1979

AT&T Bell labs (C, C++ in 83, Unix, a lot more)

So a couple of useful things, that may still be useful today

And eight nobel prizes which i didn't know

Computer Scientists playground

No Laser printers, default from computer's is dot matrix printer
